

PT EDWARD
GARMINDOTAMA

Denim Garment Manufacturer

Full-Package Manufacturing · OEM / ODM · CMT

SINCE 2002

TANGERANG, INDONESIA

ABOUT US

Over 20 years in denim.

PT Edward Garmindotama is a denim manufacturer based in Tangerang, Indonesia, operating since 2002. We produce jeans, jackets, shorts, and denim chinos for domestic retail brands and export buyers, and we work with both emerging and established brands.

We manage the production process from pattern development, cutting, and sewing through to washing, finishing, and packing. Washing and finishing are carried out with established finishing partners, with the process and approvals managed by us.

We work with denim weights from 6 oz upward, from lightweight to heavyweight fabrics, and support a wide range of garment construction and washing techniques.

We work directly with the brands we produce for, allowing communication to stay close to the production team. Questions about materials, fit, washing, or production can be addressed directly, helping decisions move quickly and reducing unnecessary misunderstandings.

OUR SERVICES

Full-Package Manufacturing

We manage the production process from fabric and trim sourcing, pattern making, and product development through production, washing, finishing, and packing. This production model is commonly referred to as FOB in garment sourcing.

For brands that want a manufacturing partner to coordinate the production process.

CMT (Cut, Make, Trim)

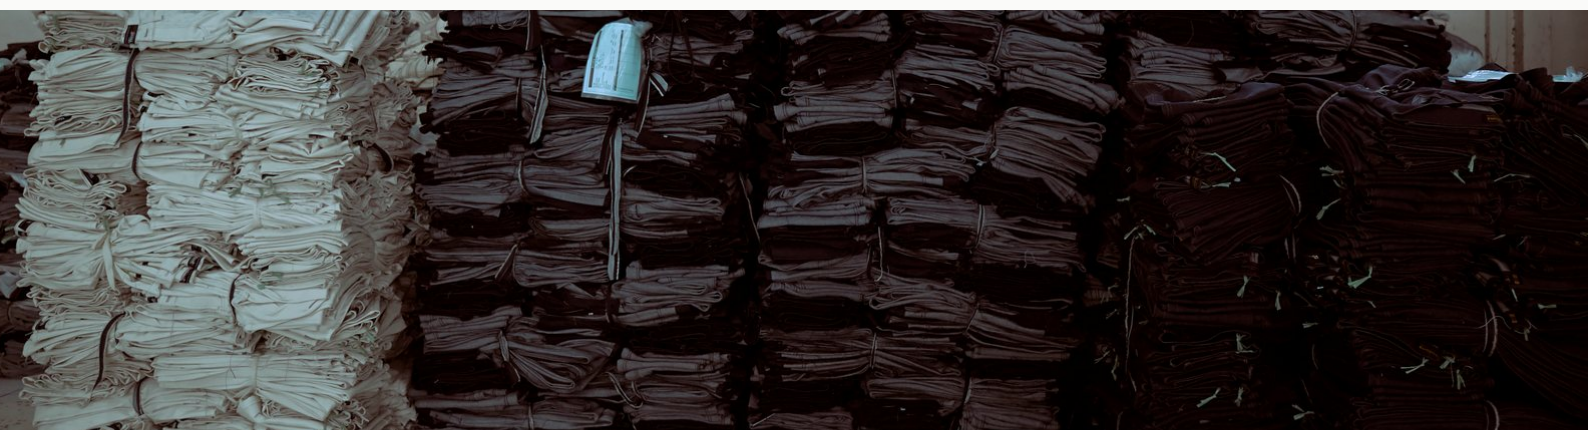

You supply the fabric and trims. We manage cutting, sewing, and finishing according to your specifications.

For brands with their own material supply, nominated mills, or established production specifications.

Product Development

Pattern making, sampling, fit development, and wash direction. Bring us a tech pack, design reference, or existing garment and we can develop the pattern, fit, and sample for production. Our base blocks are developed and held in-house, and each fit can be adjusted to your specification.

Available as a standalone service or as part of Full-Package Manufacturing. OEM and ODM arrangements are both supported.

PROCESS

Washing and finishing

Washing and finishing are developed to achieve the target colour, hand feel, and final appearance. Common treatments include whiskering, scrub, bleach and snow, bio wash, bio stone, garment wash, vintage, tint, and black dye. Other wash effects can be developed against your reference or sample. Washing is carried out through established finishing partners, with the process and approvals managed by us. Wash colour and samples are reviewed and approved before bulk production begins.

Quality control

A production sample is approved before bulk production begins. Inspection is then carried out inline during production and again before packing.

How We Work

01 Enquiry	Discuss product, quantity, materials, references, and specifications.
02 Quotation	Review requirements and provide pricing based on the requested production scope.
03 Sample	Develop pattern and sample, and establish fit, construction, materials, and wash direction.
04 Work Order	Confirm specifications, quantities, approvals, and production requirements.
05 Production	Proceed with bulk production according to the approved specifications.
06 QC & Finishing	Inline inspection during production and final inspection before packing. Washing and finishing coordinated where applicable.
07 Shipment	Complete packing and shipment according to the agreed delivery terms.

Working with established brands.

If you already have an established product, tech pack, pattern, approved sample, material supply, or production specification, we can work directly from your existing requirements.

01 Work from what you already have

Send an existing garment, tech pack, or specification and we can match construction, fit, and wash treatment. Existing product production, new styles, and additional production capacity are all supported, through CMT or Full-Package Manufacturing.

02 Patterns and wash recipes kept on file

Approved patterns and wash recipes are kept on file, so repeat orders are produced against the same specification rather than developed again from the beginning.

03 Trial orders

If you are assessing a new manufacturing partner, a single style or colourway can be produced as a trial run before any wider production is committed.

04 Ongoing production

We are equipped to support ongoing production as your requirements evolve, covering repeat orders, seasonal collections, new product development, and additional capacity.

EXPORT CAPABILITY

01 Experience

For over two decades we have exported to buyers in Russia, the Middle East, and across Asia, alongside production for domestic retail brands.

02 Delivery terms

Free on Board (FOB) Tanjung Priok is our standard term. Ex-Works (EXW) is available on request, and other ports can be arranged upon request.

03 Container loading

Containers are loaded at our factory, reducing unnecessary handling before departure. Both full container load (FCL) and consolidated shipments (LCL) are accommodated.

04 Documentation

Commercial invoice, packing list, and customs clearance are handled in-house. Certificate of Origin (Surat Keterangan Asal, SKA) is issued as part of the standard export process. Freight forwarding can be arranged through our forwarder or one nominated by you.

05 Inspection

You are welcome to appoint your own third-party inspector, before or during production.

CERTIFICATIONS & DOCUMENTATION

Fabric certificates, mill test reports, and material specifications are provided per order where available from the mill. Third-party inspection is welcome before, during, or after production, at your appointment.

GETTING STARTED

MINIMUM ORDER	120 pcs per style, with a minimum of 60 pcs per wash colour.
CAPACITY	20,000 pcs per month. Additional capacity can be scheduled by arrangement.
SAMPLING	5–10 working days, depending on whether the pattern already exists.
PRODUCTION	15–30 working days after sample approval, depending on order quantity and design complexity.
MATERIALS	If fabric is not available at the mill, sourcing typically takes 30–45 days.
CUSTOM TRIMS	1–2 months where sourcing and sampling are required.
PACKING	Polybagging, hangtags, care labels, composition and size labels, barcodes, price tickets, and master carton packing are arranged to your specification, including multilingual labelling where required. Label and tag wording is supplied and approved by you. Trims can be sourced by us or supplied by you.
